

INDEX

TO FOURTH ANNUAL REPORT, 1886.

	PAGE
Absorption of ammonia from hen manure,	104
Ammonia absorbents,	104
Ammonia in drinking waters,	122
Ammonium sulphate,	118
Amount received for cream during feeding experiment with milch cows,	30
Analysis of ammonium sulphate,	118
" " apples,	49
" " apple pomace,	49
" " ashes of chestnut railroad-ties,	105
" " ashes of cotton-seed hulls,	108, 109
" " Baldwin apples,	49
" " blood,	118
" " bone compost,	117
" " bone soup,	118
" " Canada wood ashes,	106
" " Chicago gluten meal,	38
" " compound fertilizers,	115, 116
" " Connecticut tobacco stems,	101
" " corn and cob after treatment in silo,	65
" " corn and cob before treatment in silo,	65
" " corn-cob meal,	41
" " corn ensilage,	20, 63
" " corn fodder,	19
" " corn meal,	20
" " corn fodder from fertilized plats,	69
" " corn refuse from starch factory,	42
" " cotton-seed hull ashes,	108, 109
" " damaged cotton-seed meal,	104
" " dissolved boneblack,	114
" " double manure salt,	111
" " dried blood,	118
" " dried fish,	112
" " English hay,	81
" " ensilage of apple pomace,	67
" " feed-stuffs with reference to fertilizing ingredients,	45
" " fertilizing ingredients in corn cobs,	47
" " " " " " corn meal,	47
" " " " " " globe mangold,	48
" " " " " " Vilmorin sugar beet,	48

	PAGE
Analysis of fish and potash,	131
“ “ fish waste,	111
“ “ flamingo guano,	114
“ “ fodder, explanation of,	34
“ “ fresh hen manure,	105
“ “ German high grade superphosphate,	113
“ “ glucose refuse,	103
“ “ gluten meal,	51
“ “ ground bone,	117
“ “ hard pine wood ashes,	106
“ “ Havana tobacco stems,	102
“ “ hay of oats,	76
“ “ hen manure, dry,	104
“ “ high grade superphosphate,	113
“ “ hominy meal,	40
“ “ hop refuse,	102
“ “ Lane's improved sugar beet,	21
“ “ maple sugar sap,	119
“ “ material fed during experiment with milch cows,	19-22
“ “ muriate of potash,	110
“ “ Peruvian guano,	112
“ “ potatoes,	83
“ “ provender,	51
“ “ Rhode Island greening,	49
“ “ rotten brewers' grains,	103
“ “ rowen after treatment in silo,	66
“ “ rowen dried in field,	66
“ “ rye bran,	40
“ “ self-husking corn,	42
“ “ serradella, in bloom,	78
“ “ serradella, fully matured,	79
“ “ steamed bones,	116
“ “ sulphate of potash,	110
“ “ sweet apples,	49
“ “ sweet apple pomace,	42
“ “ the “ concentrated feed,”	44
“ “ vetch, collected when in bloom,	77
“ “ vetch, fully matured,	77
“ “ waste hemlock tan bark ashes,	105
“ “ well waters,	120
“ “ wheat bran,	21, 38, 50
“ “ wheat meal,	50
“ “ wheat middlings,	39, 50
“ “ wood ashes,	106, 107, 108
“ “ yellow sweet corn,	41
Apples, analyses of,	49
“ “ pomace,	42, 49
Argument in favor of the silo,	66
Ashes, analyses of,	105-109
Ashes of chestnut railroad-ties,	105
“ “ cotton-seed hulls,	108, 109
Average composition of barnyard manure,	103
“ “ precipitation for 48 years,	125
“ “ temperatures for 48 years,	125, 128
Baldwin apple,	49
Barnyard manure, average composition of,	103

	PAGE
Barnyard manure, in farming,	46
“ “ value depends on,	46
Blood, dried,	118
Boneblack, dissolved,	114
Bone compost,	117
Bones, composting of,	118
“ ground,	117
“ steamed,	116
Bone soup,	118
Brewer's grains, rotten	103
Bulletins of station,	10
Canada wood ashes,	106
Champion of England pea,	94
Chlorine in drinking waters,	122
Cleveland's Alaska pea,	94
“ Improved Valentine beans,	95
“ Rural New Yorker pea,	94
Composition of green cow pea,	79
“ “ “ fodder oats,	75
“ “ “ serradella,	78
“ “ “ vetch,	76
Composting bones and wood ashes,	117, 118
Compound fertilizers,	115, 116
“ Concentrated feed,”	44, 45
Connecticut tobacco stems,	101
Corn and cob, analysis of,	65
“ “ “ “ “ after treatment in silo,	65
Corn cobs, fertilizing ingredients in,	47
Corn-cob meal,	41
Corn, comparative value of large variety,	59
“ fodder, analysis of,	19
“ fodder, from fertilized plats,	69
“ experiments with,	70
“ ensilage,	20, 61, 63
“ meal, fertilizing ingredients in	47
“ meal, analysis of,	20
“ plats,	53, 73
“ plats, fertilizers used on,	53, 70
“ plats, showing drainage system,	57
“ recommendations for fertilization,	54
“ refuse from starch factory,	42
“ results of experiments with,	69
“ yield of plats,	71
Cost of feed per quart of milk,	17
Cotton-seed hull ashes,	108, 109
“ meal, damaged,	104
Cream, amount received during experiment with milch cows,	30
“ number of spaces required to make one pound of butter,	30
Creamery record during experiment with milch cows,	30
Cow pea,	79
Damaged cotton-seed meal,	104
Digestible matter fed during experiment with cows,	22-30
Digestibility of fodders,	35
Dissolved boneblack,	114
Double manure salts,	111
Dried blood,	118
Dried fish,	112

	PAGE
Drinking waters, ammonia in,	122
“ “ analyses of,	120
“ “ article on,	121
“ “ chlorine in,	122
“ “ directions for sending on samples for analysis,	123
“ “ hardness of,	123
“ “ interpretation of analyses,	123
“ “ organic matter in,	122
“ “ solids in,	123
Dry matter fed during experiment with milch cows,	16
Dry matter in fodders,	34
English hay, analysis of,	81
Ensilage, acids in,	64
“ corn,	63
“ description of,	64
“ from apple pomace,	67
Examinations for metallic poisons,	119
Experiments with farm and garden crops,	94
“ “ fodder corn,	52
“ “ green fodder,	74
“ “ milch cows,	11-31
“ “ potatoes,	82-94
“ “ potatoes, object of,	82
“ “ scabby potatoes as seed,	89
Factory refuse as fodder,	43
Farm and garden crops, experiments with,	94
Fat in fodders,	35
Feeding experiments,	11-31
“ principles of,	13
Fertilizers, analyses of,	97-119
“ influence on quantity and quality of fodder crops,	68-74
“ mechanical condition of,	100
“ moisture in,	100
“ valuation of,	97-100
Fertilizing ingredients, trade values of,	98
Field A, diagram of,	57
“ B, “ “	73
“ C, “ “	74
“ experiments,	52-97
“ experiments, miscellaneous,	94
Fish and potash,	113
“ waste,	111
Flamingo guano,	114
Fodder and fodder analyses,	31-68
“ articles, value of,	11, 37
“ corn and corn ensilage,	58-68
“ “ experiments with,	52
“ “ for ensilage,	60
“ “ results of experiments, with time of gathering for ensilage,	60
“ “ value depends on,	58
“ “ vegetable matter in, at different stages of growth,	58-60
Frosts in 1886,	125
Globe mangold,	48
Glucose refuse,	103
Gluten meal, fertilizing ingredients in,	51
“ “ analysis of,	38

	PAGE
Grass plats,	68
" " yield of,	71
Green fodder, feeding of,	74
Green fodder oats,	75-82
Guano, flamingo,	114
" Peruvian,	112
Ground bone,	117
Hard pine wood ashes,	106
Havana tobacco stems,	102
Hay, analyses of,	19, 81
Hay of oats,	76
" " feeding of,	81
Hen manure,	104, 105
Hemlock tan bark ashes,	105
Highest and lowest temperatures in 1886,	126
High grade superphosphate,	113
Hominy meal,	40
Hop refuse,	102
Horse bean,	95
Influence of fertilizers on quantity and quality of some prominent fodder crops,	68-74
Lupine,	95, 96
Manure salts,	111
Maple sugar sap,	119
Marrowfat pea,	94
Mechanical condition of fertilizers,	100
Metallic poisons, examinations for,	119
Meteorology,	124-130
Method of feeding adopted during feeding experiment,	11
Method of filling silo,	61
Middlings,	50
Milch cows, experiment with,	11-31
Milk analyses,	30
Milk, cost of feed per quart,	17, 18
" record of, during feeding experiment,	30
Mineral constituents in fodders,	31
Miscellaneous analyses,	119
" field experiments,	94-97
Moisture in fertilizers,	100
Muriate of potash,	110
Nitrogenous constituents of fodders,	31
" matter,	35
Non-nitrogenous constituents of fodders,	31
" matter,	35
Nutritive ratio,	14, 36
Nutritive ratio of rations during feeding experiment with cows,	23-30
Oats, hay of,	76
Organic matter in drinking waters,	122
Peas,	94
Peruvian guano,	112
Potatoes, analyses of,	83
" average per cent. of solids in,	84
" determination of solids in,	85
" conclusions from experiments with,	89
" experiments with,	82-92
" experiments with fertilizers for,	82-84
" fertilizers used in experiment,	87-90
